

## Watkiss Two-Knife Trimmer

The two-knife trimmer completes a single-pass booklet making system for full-bleed print applications.

Two-knife trimmer (centre module)

## Two-Knife Trimmer

The 2-KT Two-Knife Trimmer is a compact unit that trims the top and bottom edge of stitched or stapled booklets. Used in conjunction with a fore-edge trimmer, it gives a professional and cost effective solution for full-bleed printed work.

It is perfect for a wide range of traditional and on-demand applications, where the booklets are quickly finished in one streamlined operation without the need for additional handling or finishing steps.

The 2-KT connects with Watkiss BookMaster and Automatic Stitch-Fold bookletmakers. It is easily incorporated into Watkiss Vario and DigiVAC collating and finishing systems, fitting after the fore-edge trimmer. It is quick and easy to set up from a digital display and jobs can be saved in memory. The side trim can be adjusted with precision to give highly accurate cutting for booklets up to 100 pages (80gsm).
